📄 SUMMARY

B. Tech Computer Science (AI & ML) graduate and AI/ML-Driven Research & Data Analyst with hands-on experience in machine learning, predictive modeling, data analytics, and AI research. Skilled in Python, SQL, Power BI, Excel, Pandas, NumPy, Scikit-learn, Random Forest, XGBoost, regression, classification, EDA, and data visualization. Experienced in transforming raw data into actionable insights, developing predictive models, and applying data-driven approaches to real-world problems. Strong analytical, research, and problem-solving skills with a focus on AI/ML research, predictive analytics, and business intelligence

👛 PROFESSIONAL EXPERIENCE

Data Analyst Intern, Prowiz Analytics

Currently working on a live analytics and data management project for Hindustan Unilever Limited (HUL) at its Haridwar manufacturing plant through ProWiz Analytics. My responsibilities include managing, validating, and maintaining production data using the ProWiz CMS platform to ensure data accuracy and reliability. I perform data cleaning, processing, and quality checks to support accurate reporting and analysis. I also create reports and dashboards to track key production metrics and help teams make informed operational decisions. Additionally, I work closely with cross-functional teams to improve data quality, streamline workflows, resolve data-related issues, and support continuous process improvement through data-driven insights.

05/2026 – 08/2026
Haridwar, Uttarakhand

AI Engineer Intern, Qmansys Infosolutions LLP

- Built and deployed an end-to-end AI/ML system for an AI Power Career Guidance Platform, covering research to product showcase.
- Conducted literature review, identified research gaps, and defined objectives to select and optimize suitable machine learning algorithms. Trained, evaluated, and enhanced model performance using real-world data; implemented testing and optimization techniques.
- Integrated AI models with a GUI interface and contributed to final product launch and presentation.

07/2025 – 10/2025

Data Analysis Intern, InVie Technologies Pvt. Ltd.

During my internship at InVie Technologies Pvt. Ltd., I was designated as a Data Analysis Intern. My primary responsibilities included collecting raw datasets, cleaning and preprocessing them to remove inconsistencies, analyzing data to extract meaningful insights, and preparing visualizations for easier interpretation. I also contributed to creating structured reports for weekly review meetings with my mentor.

06/2025 – 07/2025

🎓 EDUCATION

BTech in CSE AI&ML, Raj Kumar Goel Institute Of Technology

2022 – 2026
Ghaziabad

12th Grade, Translam Academy International

2021 – 2022
Meerut

10th Grade, Translam Academy International Meerut

2019 – 2020
Meerut

🧠 SKILLS

Technical Skill

Python | AI & Machine Learning | Data Analytics | Data Visualization | Predictive Modeling | Statistical Analysis | EDA | Data Preprocessing | Regression | Random Forest | XGBoost | Excel | SQL | Power BI | Pandas | NumPy | Git & GitHub

Soft Skill

Analytical Thinking, Problem-Solving, Research & Curiosity, Leadership, Effective Communication, Critical thinking, Time Management, Time Management, Work Ethics

CERTIFICATES

Basic To Advanced Tableau Dashboard Mastery, Skill Nation

Completed a comprehensive Tableau course covering data visualization, interactive dashboards, calculated fields, parameters, filters, and real-world business dashboards for data-driven decision making.

Basic To Advance SQL

Completed a Basic to Advanced SQL certification from Skill Nation, covering SQL fundamentals, joins, subqueries, aggregations, and advanced querying techniques.

UiPath Studio – Automation Development

Gained foundational knowledge of robotic process automation (RPA), workflow automation, and bot development using UiPath Studio.

Business Intelligence Using Power BI

This training covered the fundamentals of Business Intelligence and hands-on learning of Microsoft Power BI. I learned how to clean, transform, and model data. I also created interactive dashboards, visual reports, and gained practical experience in connecting multiple data sources.

Oracle Fusion Cloud Applications HCM Certified Foundations Associate

Validated knowledge of Oracle Fusion Cloud HCM fundamentals, workforce management processes, and cloud-based HR solutions.

Schema Design Anti-Patterns

Studied common database design mistakes and best practices for creating efficient and maintainable schemas

Basic To Advanced Microsoft Excel

Completed an advanced masterclass covering essential to expert-level Microsoft Excel functions including formulas, pivot tables, charts, data analysis tools, and automation techniques. Trained under Microsoft Certified Trainer Mr. Jatan Shah

MongoDB Data Modeling Path

Learned NoSQL database design, schema modeling, performance optimization, and best practices for scalable database applications

Identifying Database Workloads

Learned to analyze database workloads and optimize data models for performance, scalability, and efficiency.

PROJECTS

AI Powered Career Guidance System, *Machine Learning Based Career Recommendation System*

Developed an AI-powered Career Guidance System that assists engineering students in identifying suitable career paths based on their skills, interests, academic performance, and subject preferences. The system leverages the Random Forest machine learning algorithm to analyze user data and generate personalized career recommendations with high accuracy. Built using Python, Flask, and SQLite, the web-based platform provides an intuitive interface for students to explore career opportunities aligned with their strengths and aspirations. The model achieved approximately 93% prediction accuracy, offering a reliable, scalable, and data-driven solution for informed career decision-making.

Gurgaon Real Estate Market Analysis, *Worked as a Data Analyst for a real estate advisory firm operating in Gurgaon*

Developed a comprehensive real estate market analysis project using Python to examine residential property listings across various sectors of Gurgaon. The project involved data cleaning, preprocessing, and exploratory data analysis (EDA) using Pandas and NumPy to uncover trends in property prices, area, BHK configurations, builder performance, and location-wise market dynamics. Created insightful visualizations using Matplotlib and Seaborn to support data-driven decision-making for buyers, investors, and developers. The analysis provided actionable insights into pricing patterns, investment opportunities, and key factors influencing property values in the Gurgaon real estate market.

Sales/Data Analytics Dashboard using Power BI, *Tools & Technologies Used: Power BI, Power Query, Microsoft Excel, Data Visualization*

Developed an end-to-end Power BI dashboard involving data cleaning, transformation, data modeling, and interactive visualizations using Power Query and DAX to generate meaningful insights.

Zepto Inventory Dataset, *Tools & Technologies Used: SQL, Python, Power BI, Excel*

Performed end-to-end vendor performance data analytics using SQL for data extraction and cleaning, Python for exploratory analysis, and Power BI to develop an interactive dashboard delivering actionable business insights.

House Price Prediction, *Tools & Technologies: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Machine Learning, Regression, EDA*

House Price Prediction, Machine Learning-Based Regression Model
Developed a machine learning model to predict residential property prices based on features such as location, area, number of bedrooms, bathrooms, and other property attributes. Performed data cleaning, preprocessing, exploratory data analysis, feature engineering, and model evaluation. Implemented regression techniques using Python and Scikit-learn to identify the factors influencing property prices and generate accurate price predictions. Evaluated model performance using appropriate regression metrics and visualized key insights to support data-driven property valuation.

Future Hotel Cancellation Prediction,

Tools & Technologies: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Machine Learning, Classification, EDA, Data Preprocessing
Future Hotel Cancellation Prediction, Machine Learning-Based Classification Model

Developed a machine learning classification model to predict whether hotel bookings are likely to be cancelled based on historical booking information. Performed data preprocessing, handling of missing values, categorical encoding, exploratory data analysis, and feature selection to prepare the dataset for modeling. Applied classification algorithms to identify cancellation patterns and evaluated model performance using accuracy, precision, recall, F1-score, and confusion matrix. The project provides data-driven insights that can help hotels improve booking management, reduce revenue loss, and optimize room availability.

PUBLICATIONS

AI Powered Career Guidance System, *Global Institute of Information Technology (GIIT), Greater Noida*

Presented a research paper titled "AI Powered Career Guidance System" at the International Conference on Bridging Domains Through Data Analytics and Artificial Intelligence (BDDAAI-2026). The research focuses on leveraging Artificial Intelligence to provide personalized career
